

Integrated, Customized Roof Restoration and Coatings

A total cost, very best solution to your commercial and industrial roofing needs.

Mast Roofing integrated, customized applications are **the very best solution** your roofing nightmares.

Fixing or replacing a worn-out leaky roof is like buying new tires: the last thing you want to spend money on! But our energy-saving restoration is **an investment with a monthly return** (ROI) every time you pay the utility bill.

By reflecting 85% of the solar rays hitting your roof, the Department of Energy finds that our coatings **save an average 15% on air conditioning**. Our optional foam applications also cut down on heat transmission into the building in summer, and out of it in winter. It will also stop air infiltration which plagues most other systems.

Conventional roof repair is obsolete. Tear-off and replacement is expensive, wasteful, and leaves you with the same inferior product. New metal roofs are riddled with seams and fasteners which are built-in entry points for water, ice, and air infiltration. Membranes and other roofing structures are immediately vulnerable to tears and cracks.

Mast Roofing's integrated coatings are similar to laying up a ship's fiberglass hull: the entire restoration structure is **bonded to the existing roof, forming an elastic, monolithic, impregnable shield** can't blow off or tear.

"But Wait, there's more!" Fast forward to a future point in time when even our integrated, bonded roofing structure reaches the end of its life cycle. With any other roof, you will have zero residual value. In fact you will have a negative residual value as you will be faced with tearing off and disposing of the old structure. The Mast Roofing application, however, will still be intimately bonded to the sub-structure, and need substantially less than starting from scratch.

All this is just talk without a guarantee. Mast Roofing stands behind their work with a **believable guarantee**. What makes them believable is a proven track record of 25 years as General Contractors, and **12 years as licensed and bonded Roofing Contractors**. Our many testimonials speak for themselves. Behind them is another proven performer, the manufacturers of the arsenal of roofing products they use: Conklin Roofing Systems.

Conklin products have been supplying materials and training to specialized roofing contractors for 35 years, and many of their very first applications are still in service today. Their products are UL approved; fire code approved; Energy Star rated by the DOE; and Title 24 compliant in the state of California.
